

Protein and Amino Acid Test Kit

To test authentic “Caviar of the East”
Edible Bird’s Nest

Biochemistry unit, Faculty of Veterinary Science,
Chulalongkorn University, Bangkok 10330, Thailand.

- Edible bird’s nest is made almost entirely from glycoproteins secreted by saliva of swiftlets.
- The adulterants such as fungus, agar, gum and sap are mostly non protein diet with no taste and virtually indistinguishable from the real thing.

Vet Biochemistry (VBC) Bird's Nest Test Kit

- Our kit is very simple.
- Only one easy step and safe.
- Purple color means authentic bird’s nest.

From: birdnest.com.sg

- But because the different between chemical nature of the adulterants and authentic bird’s nest.
- Our research group developed a test kit base on protein binding chemical to differentiate the real from the fake products.

- The real edible bird nest can clearly identify.
